

DID YOU KNOW THAT YOU COULD BE USING NON-COMPLIANT LINTELS THAT DON'T MEET AUSTRALIAN STANDARDS? DONT GET CAUGHT OUT- USE VESPOL LINTELS.

Every lintel installed in Australia must contain certain markings for clear identification post-install. All Vespol lintels meet this requirement. For added peace we engaged a certified Engineer to independently destructively test our Lintel range, further cementing the strength and durability of Vespol's lintels which perform without relying on composite action from the brickwork and mortar.

STAMPED

Vespol's lintels are not only built to last, but also permanently marked with our brand, Australian Standard number and durability classification on the face for visibility after install as required by AS2699.3:2020.

LABELLED

We take pride in our lintels, and we are committed to providing our customers with complete transparency, and compliance with AS2699.3:2020. That's why our lintels are clearly labelled with the Australian Standard, durability classification, manufacturer, and any limitations.

TESTED

We go the extra mile to provide our customers with the highest quality Vespol lintels. That is why our lintels are hot-dip galvanized and rigorously tested ensuring the coating thickness exceeds 85 microns to meet the 'R3' durability classification of AS2699.3:2020.
